4 Other Nonfunctional Requirements **10**
- 4.1 Performance Requirements . . . 10
- 4.2 Saftey Requirements . . . 10
- 4.3 Security Requirements . . . 10
- 4.4 Software Quality Attributes . . . 10
- 4.5 Business Rules . . . 11

5 Other Requirements **12**

1 Introduction

1.1 Purpose

This template illustrates organising the functional requirements for the product by system features, and the primary services provided by the product. You may p

1.2 Document Conventions

This template illustrates organising the functional requirements for the product by system features, the major services provided by the product. You may prefer to organise this section by use case, mode of operation, user class, object class, functional hierarchy, or combinations of these, whatever makes the most logical sense for your product.¿

System Feature 1

¡Don't say "System Feature 1." State the feature name in just a few words.¿

4.1.1 Description and Priority

¡Provide a short description of the feature and indicate whether it is of High, Medium, or Low priority. You could also include specific priority component ratings, such as benefit, penalty, cost, and risk (each rated on a relative scale from a low of 1 to a high of 9).¿

4.1.2 Stimulus/Response Sequences

¡List the sequences of user actions and system responses that stimulate the behaviour defined for this feature. These will correspond to the dialogue elements associated with use cases.¿

4.1.3 Functional Requirements

¡Itemize the detailed functional requirements associated with this feature. These software capabilities must be present for the user to carry out the services they feature provides or to execute the use case. Include how the product should respond to anticipated error conditions or invalid inputs. Requirements should be concise, complete, unambiguous, verifiable, and necessary. Use "TBD" as a placeholder to indicate when necessary information is unavailable.¿

¡Each requirement should be uniquely identified with a sequence number or a meaningful tag.¿

REQ-1:

REQ-2:

System Feature 2 (and so on)

1.3 Intended Audience and Reading Suggestions

This template illustrates organising the functional requirements for the product by system features, the major services provided by the product. You may prefer to organise this section by use case, mode of operation, user class, object class, functional hierarchy, or combinations of these, whatever makes the most logical sense for your product.¿

System Feature 1

¡Don't say "System Feature 1." State the feature name in just a few words.¿

4.1.1 Description and Priority

¡Provide a short description of the feature and indicate whether it is of High, Medium, or Low priority. You could also include specific priority component ratings, such as benefit, penalty, cost, and risk (each rated on a relative scale from a low of 1 to a high of 9).¿

4.1.2 Stimulus/Response Sequences

¡List the sequences of user actions and system responses that stimulate the behaviour defined for this feature. These will correspond to the dialogue elements associated with use cases.¿

4.1.3 Functional Requirements

¡Itemize the detailed functional requirements associated with this feature. These software capabilities must be present for the user to carry out the services they feature provides or to execute the use case. Include how the product should respond to anticipated error conditions or invalid inputs. Requirements should be concise, complete, unambiguous, verifiable, and necessary. Use "TBD" as a placeholder to indicate when necessary information is unavailable.¿

¡Each requirement should be uniquely identified with a sequence number or a meaningful tag.¿

System Feature 2 (and so on)

1.4 Product Scope

This template illustrates organizing the functional requirements for the product by system features, the major services provided by the product. You may prefer to organize this section by use case, mode of operation, user class, object class, functional hierarchy, or combinations of these, whatever makes the most logical sense for your product.¿

System Feature 1

¡Don't really say "System Feature 1." State the feature name in just a few words.¿

4.1.1 Description and Priority

¡Provide a short description of the feature and indicate whether it is of High, Medium, or Low priority. You could also include specific priority component ratings, such as benefit, penalty, cost, and risk (each rated on a relative scale from a low of 1 to a high of 9).¿

4.1.2 Stimulus/Response Sequences

¡List the sequences of user actions and system responses that stimulate the behavior defined for this feature. These will correspond to the dialog elements associated with use cases.¿

4.1.3 Functional Requirements

¡Itemize the detailed functional requirements associated with this feature. These are the software capabilities that must be present in order for the user to carry out the services provided by the feature, or to execute the use case. Include how the product should respond to anticipated error conditions or invalid inputs. Requirements should be concise, complete, unambiguous, verifiable, and necessary. Use "TBD" as a placeholder to indicate when necessary information is not yet available.¿

¡Each requirement should be uniquely identified with a sequence number or a meaningful tag of some kind.¿

REQ-2:

System Feature 2 (and so on)

1.5 References

This template illustrates organizing the functional requirements for the product by system features, the major services provided by the product. You may prefer to organize this section by use case, mode of operation, user class, object class, functional hierarchy, or combinations of these, whatever makes the most logical sense for your product.¿

System Feature 1

¡Don't really say "System Feature 1." State the feature name in just a few words.¿

4.1.1 Description and Priority

¡Provide a short description of the feature and indicate whether it is of High, Medium, or Low priority. You could also include specific priority component ratings, such as benefit, penalty, cost, and risk (each rated on a relative scale from a low of 1 to a high of 9).¿

4.1.2 Stimulus/Response Sequences

¡List the sequences of user actions and system responses that stimulate the behavior defined for this feature. These will correspond to the dialog elements associated with use cases.¿

4.1.3 Functional Requirements

¡Itemize the detailed functional requirements associated with this feature. These are the software capabilities that must be present in order for the user to carry out the services provided by the feature, or to execute the use case. Include how the product should respond to anticipated error conditions or invalid inputs. Requirements should be concise, complete, unambiguous, verifiable, and necessary. Use “TBD” as a placeholder to indicate when necessary information is not yet available.¿

2 Overall Description

2.1 Product Perspective

Specify those requirements that are concerned with possible loss, damage, or harm that could result from the use of the product. Define any safeguards or actions that must be taken, as well as actions that must be prevented. Refer to any external policies or regulations that state safety issues that affect the product's design or use. Define any safety certifications that must be satisfied.

2.2 Product Functions

Specify those requirements that are concerned with possible loss, damage, or harm that could result from the use of the product. Define any safeguards or actions that must be taken, as well as actions that must be prevented. Refer to any external policies or regulations that state safety issues that affect the product's design or use. Define any safety certifications that must be satisfied.

2.3 User Classes and Characteristics

Specify those requirements that are concerned with possible loss, damage, or harm that could result from the use of the product. Define any safeguards or actions that must be taken, as well as actions that must be prevented. Refer to any external policies or regulations that state safety issues that affect the product's design or use. Define any safety certifications that must be satisfied.

2.4 Operating Environment

Specify those requirements that are concerned with possible loss, damage, or harm that could result from the use of the product. Define any safeguards or actions that must be taken, as well as actions that must be prevented. Refer to any external policies or regulations that state safety issues that affect the product's design or use. Define any safety certifications that must be satisfied.

2.5 Design and Implementation Constraints

Specify those requirements that are concerned with possible loss, damage, or harm that could result from the use of the product. Define any safeguards or actions that must

be taken, as well as actions that must be prevented. Refer to any external policies or regulations that state safety issues that affect the product's design or use. Define any safety certifications that must be satisfied.

2.6 User Documentation

Specify those requirements that are concerned with possible loss, damage, or harm that could result from the use of the product. Define any safeguards or actions that must be taken, as well as actions that must be prevented. Refer to any external policies or regulations that state safety issues that affect the product's design or use. Define any safety certifications that must be satisfied.

2.7 Assumptions and Dependencies

Specify those requirements that are concerned with possible loss, damage, or harm that could result from the use of the product. Define any safeguards or actions that must be taken, as well as actions that must be prevented. Refer to any external policies or regulations that state safety issues that affect the product's design or use. Define any safety certifications that must be satisfied.

3 Features

3.1 Feature 1

One of the most important requirements of any application is the ability to authenticate users. This ensures that only authorized users can access the system and its features. The system should provide a secure login process that verifies the user's identity and allows access only to authorized users. The user authentication process should be designed to prevent unauthorized access and ensure the confidentiality of user data.

3.2 Feature 2

Another important functional requirement is the ability to search for data within the system. This functionality is particularly important in systems that store a large amount of data. Users should be able to search for specific data using keywords or other search criteria, and the system should return relevant results in a timely manner. The search functionality should be designed to be intuitive and easy to use, with clear instructions and feedback provided to the user.

Table 3.1: Requirement Tracability Matrix

RTM Id	**URID**	**SRID**	**Requirement**
1.	URID-63d9f4-1e9d32-84c80d	SRID-63d9f7-3e12cd-9eecbc	Login
2.	URID-63d9f4-1e9d32-84c80d	SRID-63d9f7-2712cd-9eecbc	Create New Account

4 Other Nonfunctional Requirements

4.1 Performance Requirements

If there are performance requirements for the product under various circumstances, state them here and explain their rationale, to help the developers understand the intent and make suitable design choices. Specify the timing relationships for real time systems. Make such requirements as specific as possible. You may need to state performance requirements for individual functional requirements or features.

4.2 Saftey Requirements

Specify those requirements that are concerned with possible loss, damage, or harm that could result from the use of the product. Define any safeguards or actions that must be taken, as well as actions that must be prevented. Refer to any external policies or regulations that state safety issues that affect the product's design or use. Define any safety certifications that must be satisfied.

4.3 Security Requirements

Specify any requirements regarding security or privacy issues surrounding use of the product or protection of the data used or created by the product. Define any user identity authentication requirements. Refer to any external policies or regulations containing security issues that affect the product. Define any security or privacy certifications that must be satisfied.

4.4 Software Quality Attributes

Specify any additional quality characteristics for the product that will be important to either the customers or the developers. Some to consider are: adaptability, availability, correctness, flexibility, interoperability, maintainability, portability, reliability, reusability, robustness, testability, and usability. Write these to be specific, quantitative, and verifiable when possible. At the least, clarify the relative preferences for various attributes, such as ease of use over ease of learning.¿

4.5 Business Rules

List any operating principles about the product, such as which individuals or roles can perform which functions under specific circumstances. These are not functional requirements in themselves, but they may imply certain functional requirements to enforce the rules

5 Other Requirements

Define any other requirements not covered elsewhere in the SRS. This might include database requirements, internationalization requirements, legal requirements, reuse objectives for the project, and so on. Add any new sections that are pertinent to the project
